

SP3481/SP3485

+3.3V Low Power Half-Duplex RS-485 Transceivers with 10Mbps Data Rate

- RS-485 and RS-422 Transceivers
- Operates from a single +3.3V supply
- Interoperable with +5.0V logic
- Driver/Receiver Enable
- Low Power Shutdown Mode (SP3481)
- -7V to +12V Common-Mode Input Voltage Range
- Allows up to 32 transceivers on the serial bus
- Compatibility with the industry standard 75176 pinout
- Driver Output Short-Circuit Protection

DESCRIPTION

Now Available in Lead Free Packaging

The **SP3481** and the **SP3485** are a family of +3.3V low power half-duplex transceivers that meet the specifications of the RS-485 and RS-422 serial protocols. These devices are pin-to-pin compatible with the Sipex SP481, SP483, and SP485 devices as well as popular industry standards. The **SP3481** and the **SP3485** feature Sipex's BiCMOS process, allowing low power operation without sacrificing performance. The **SP3481** and **SP3485** meet the electrical specifications of RS-485 and RS-422 serial protocols up to 10Mbps under load. The **SP3481** is equipped with a low power Shutdown mode.

ABSOLUTE MAXIMUM RATINGS

These are stress ratings only and functional operation of the device at these ratings or any other above those indicated in the operation sections of the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability.

| | |
|--|-----------------|
| V_{CC} | +6.0V |
| Input Voltages | |
| Logic | -0.3V to +6.0V |
| Drivers | -0.3V to +6.0V |
| Receivers | ±15V |
| Output Voltages | |
| Drivers | ±15V |
| Receivers | -0.3V to +6.0V |
| Storage Temperature | -65°C to +150°C |
| Power Dissipation per Package | |
| 8-pin NSOIC (derate 6.90mW/°C above +70°C) | 600mW |
| 8-pin PDIP (derate 11.8mW/°C above +70°C) | 1000mW |

CAUTION:
ESD (ElectroStatic Discharge) sensitive device. Permanent damage may occur on unconnected devices subject to high energy electrostatic fields. Unused devices must be stored in conductive foam or shunts. Personnel should be properly grounded prior to handling this device. The protective foam should be discharged to the destination socket before devices are removed.

SPECIFICATIONS

$T_{AMB} = T_{MIN}$ to T_{MAX} and $V_{CC} = +3.3V \pm 5\%$ unless otherwise noted.

| PARAMETERS | MIN. | TYP. | MAX. | UNITS | CONDITIONS |

SP3481/SP3485
Pinout (Top View)

DESCRIPTION

The **SP3481** and the **SP3485** are 2 members in the family of +3.3V low power half-duplex transceivers that meet the specifications of the RS-485 and RS-422 serial protocols. These devices are pin-to-pin compatible with the Sipex SP481, SP483, and SP485 devices as well as popular industry standards. The **SP3481** and the **SP3485** feature Sipex's BiCMOS process allowing low power operation without sacrificing performance.

Drivers

The driver outputs of the **SP3481** and **SP3485** are differential outputs meeting the RS-485 and RS-422 standards. The typical voltage output swing with no load will be 0 Volts to +3.3 Volts. With a load of 54Ω across the differential outputs, the drivers maintain greater than 1.5V voltage levels. The drivers of the **SP3481** and **SP3485** have an enable control line which is active HIGH. A logic HIGH on DE (pin 3) will enable the differential driver outputs. A logic LOW on DE (pin 3) will tri-state the driver outputs.

The transceivers in the **SP3481** and **SP3485** operate up to 10Mbps. The 250mA I_{SC} maximum limit on the driver output allows the **SP3481** and the **SP3485** to withstand an infinite short circuit over the -7.0V to +12.0V common mode range without catastrophic damage to the IC.

PIN FUNCTION

Pin 1 – RO – Receiver Output.

Pin 2 – \overline{RE} – Receiver Output Enable Active LOW.

Pin 3 – DE – Driver Output Enable Active HIGH.

Pin 4 – DI – Driver Input.

Pin 5 – GND – Ground Connection.

Pin 6 – A – Driver Output/Receiver Input Non-inverting.

Pin 7 – B – Driver Output/Receiver Input Inverting.

Pin 8 – V_{CC}

Receivers

The **SP3481** and **SP3485** receivers have differential inputs with an input sensitivity as low as $\pm 200\text{mV}$. Input impedance of the receivers is typically 15kΩ (12kΩ minimum). A wide common mode range of -7V to +12V allows for large ground potential differences between systems. The receivers of the **SP3481** and **SP3485** have a tri-state enable control pin. A logic LOW on \overline{RE} (pin 2) will enable the receiver, a logic HIGH on \overline{RE} (pin 2) will disable the receiver.

The receivers of the **SP3481** and **SP3485** operate up to 10Mbps. The receiver for each of the three devices is equipped with fail-safe. Fail-safe guarantees that the receiver output will be in a HIGH state when the input is left unconnected.

Shutdown Mode for the SP3481

The **SP3481** is equipped with a Shutdown mode. To enable the Shutdown state, both the driver and receiver must be disabled simultaneously. A logic LOW on DE (pin 3) and a logic HIGH on \overline{RE} (pin 2) will put the **SP3481** into Shutdown mode. In Shutdown, supply current will drop to typical 1μA, 10μA maximum.

NOTE 1: The input pulse is supplied by a generator with the following characteristics:

PRR=250KHz, 50% duty cycle, $t_r < 6.0ns$, $Z_0=50\Omega$.

NOTE 2: C_L includes probe and stray capacitance.
